

## Controlled Substances-Quick Reference for Schedule

This list is not meant to be all-inclusive but should assist in classifying a medication as a controlled substance along with its specific schedule. Many of these products come in multiple generics. The generics also fall under the same schedule as the brand. Please see the notes in regards to combination products. Always verify the schedule of combination products. Contact pharmacist if there is a question.

#### **Combination Products:**

Many controlled substances are found in combinations and typically are listed as Schedule III or Schedule V products. These products tend to have many generics and many brand names. Therefore the list above may miss many of these products. The following guideline should help in determining a schedule for these products.

#### **Schedule III Combinations:**

These narcotics must be in combination with one or more nonnarcotic active ingredients for example acetaminophen or aspirin.

##### **A) Liquids**

- A1) 18 mg/ml or less of codeine
- A2) 3 mg/ml or less of hydrocodone
- A3) 0.5 mg/ml or less of morphine

##### **B) Tablets/Capsules**

- B1) 90 mg or less of codeine per tab/cap
- B2) 15 mg or less of hydrocodone per tab/cap

#### **Schedule V Combinations:**

These narcotics must be in combination with one or more nonnarcotic active ingredients, for example guaifenesin or acetaminophen.

##### **A) Liquids**

- A1) 2mg/ml or less of codeine (THESE ARE TYPICALLY THE COUGH SYRUPS)

##### **B) Other**

- B1) 2.5 mg of diphenoxylate and not less than 0.25 micrograms of atropine sulfate per tab/caps
